PROFESSIONAL SUMMARY

Software Engineering student at CENFOTEC University with experience developing full-stack web applications through collaborative university projects. Passionate about artificial intelligence and astrophysics. Seeking an internship to fulfill an academic curriculum requirement.

EDUCATION

Bachelor's Degree in Software Engineering - CENFOTEC University

2023 - Present

Engineering program covering the full software development lifecycle: requirements analysis, design of scalable and secure architectures, quality and testing, and team leadership under agile methodologies, built on a mathematical foundation and aligned with international standards.

High School – Tree of Life International School

2017 - 2022

SOFT SKILLS

- Pragmatic
- Structured
- Critical thinking
- Attention to detail
- Analytical thinking
- Spatial visualization

PROJECTS

Development Coordinator – Software Engineering Project 3

Jul-Aug 2026

Served on a team of 5 as one of two development coordinators on Brakket, a web platform for managing and live-streaming Esports leagues and tournaments, built with Angular 19 on the frontend, Java 21 with Spring Boot on the backend, PostgreSQL with versioned migrations (Flyway), local authentication and Google OAuth 2.0, all containerized with Docker. Responsible for ensuring the solution met the required design standards, project structure, programming principles, and database modeling, contributing to and reviewing code across most modules (authentication and roles, league management, tournaments, teams, bracket engine, disputes). The platform integrated the Twitch API for live audience metrics and an AI assistant (Google Gemini) for chat sentiment analysis, designed to attract sponsorships. We managed the project with Jira and formal documentation (project charter, SRS, design, testing); the team finished the course with an outstanding evaluation and explicit recognition from the faculty.

Technologies: Angular 19 · Java 21 · Spring Boot · PostgreSQL · Flyway · Docker · JWT / OAuth 2.0 · Twitch API · Google Gemini API · Jira

Developer (Support) – Software Engineering Project 2

Jul-Aug 2024

Worked on a team of 5 developing a web platform for comprehensive gym management, built in C#/.NET 8 with a layered architecture (API, business logic, data access, and an ASP.NET MVC UI layer) on SQL Server, with data access via ADO.NET. The system covered class and appointment bookings, enrollments, coupons and discounts, routine and exercise management, equipment inventory control, simulated PayPal payments, and tracking of each user's physical progress (weight, measurements, charts), including assigning one instructor per client and monitoring the progress of their assigned clients. Contributed code to several modules of the system, with a particular focus on manual and functional testing, verifying application behavior and identifying bugs before each delivery. The project finished the course with one of the highest grades in the program, and the faculty highlighted it as the kind of work the degree aims to cultivate in its students.

Technologies: C# · ASP.NET Core (Web API + MVC) · .NET 8 · SQL Server · ADO.NET · JavaScript · HTML/CSS

Lead Developer – Software Engineering Project 1

Sep-Dec 2023

As lead developer on a team of 4, led the implementation of an online store for agricultural products for a simulated client, using HTML, CSS, and JavaScript. It included a product catalog, purchase simulation, and user role management (administrator, seller, customer). We documented the project and held regular meetings with minutes throughout the course.

Technologies: HTML · CSS · JavaScript

Volunteer Instructor – Redes Program

2017 - 2018 - 2019

Participated as a volunteer instructor in all three editions of the Redes program, in which high school students taught basic robotics classes to public school children (ages 10–13) under a teacher's supervision. Guided groups of children in using Micro:bit, prototyping with recycled materials, and 3D modeling and printing with Tinkercad, across 8-week courses that ended with a final presentation of their projects.

Tools: Micro:bit · Tinkercad · 3D Printing

TECHNICAL SKILLS

Languages

- Java
- C++
- C#
- TypeScript
- JavaScript
- HTML
- CSS

Frameworks

- Angular
- Spring Boot
- ASP.NET

Databases

- MySQL
- PostgreSQL
- SQL Server
- MariaDB

Tools

- Docker
- Git
- GitHub
- Jira

LANGUAGES

- Spanish - Native
- English - Advanced
